

Mohamed FATTA

Full Stack Developer | Backend & Cloud-Native | AWS · Java · Node.js
Agadir, Morocco | med3fata@gmail.com | +212 638653350
Portfolio | LinkedIn | GitHub

Summary

Backend-focused Full Stack Developer with 4+ years building cloud-native applications on AWS (serverless and event-driven architectures). Currently freelancing, I build custom solutions, AI automations and Shopify apps for e-commerce clients. Core stack: Java/Spring, Python, Node.js and AWS.

Professional Experience

Freelance Full Stack Developer

2025 – Present · Remote

- Deliver end-to-end custom solutions for e-commerce clients, from scoping to production.
- Built a build-your-own-bundle feature for postcards.shop to drive upsells and lift AOV.
- Built an AI-powered automation and delivered site-wide theme updates for honeyswim.co.
- Designed and published Bundlora, a Shopify bundle-builder app on the App Store, with its first paying customer.

TypeScript, Node.js, React/Next.js, Shopify (Liquid, Apps), Supabase, AI agents (LLM).

Software Engineer — NTT DATA

February 2023 – May 2025, Tétouan

SKY OSS Project

- Built an AWS serverless real-time notification solution over WebSockets for several thousand users.
- Developed and debugged Lambda functions; unit tests (Pytest, moto).
- Improved Lambda performance by 70 % by reducing Layers and optimizing DB connections.
- Refactored a Python evaluation engine deployed as a shared Lambda Layer.
- Event-driven architecture (API Gateway, DynamoDB, SQS, SNS); IaC via AWS CDK.

Python, Pytest/moto, boto3, AWS Lambda Powertools, AWS (IAM, Lambda, API Gateway, DynamoDB, SQS, SNS, CloudWatch), AWS CDK.

Ferrovial Project — highway tolling and tracking system (Portugal)

- Debugged in production a tolling system processing tens of thousands of transactions/day.
- Aggregated gate crossings into complete journeys to compute customer billing.
- Resolved critical bugs in payment services (Kafka, dead-letter queues).
- Fixed a double-billing issue via idempotent deduplication of duplicate crossings.
- Built a recovery job replaying the DLQ, recovering hundreds of stuck transactions (out-of-order events).
- Application debugging and triggering deployments in a Kubernetes environment.
- Occasional contributions to the Angular front-end.

Java, Spring, Spring Batch, MongoDB, Kafka, Kubernetes, Angular.

GO-DISTRIBUTION Project

- Batch processing (Spring Batch) syncing several thousand records/day from a third-party system.
- Error handling and failure recovery for the batch job.
- Built reusable Angular components on the front-end.

Angular, TypeScript, Java, Spring Boot, PostgreSQL.

Software Engineer — FY Computing

October 2021 – January 2023, Rabat

- Built a SaaS platform automating application deployment for other organizations.
- Support for multiple frameworks (frontend and backend) and languages.
- Multi-tenant architecture with per-organization data isolation.
- Fine-grained IAM solution (custom Keycloak, role-based policy synchronization).
- Secured application secrets with HashiCorp Vault.
- Generic REST API for multi-cloud file management (S3, local disk), configurable.
- End-to-end API testing (Robot Framework); code reviews.

Angular, TypeScript, Keycloak, HashiCorp Vault, Robot Framework, Python, AWS (S3, EC2), Sass/CSS/Bootstrap.

Internship — Software Developer — WEPILOT

September 2020 – September 2021, Agadir

- Full-stack development of a budget management application for a university in Agadir.

Angular, TypeScript, Java, Spring Boot, MySQL.

Projects

AWS serverless applications

Personal projects

- Serverless text-to-speech backend powered by AWS Polly (TypeScript).
- Serverless email-sending service powered by AWS SES (Python).

System implementations (built from scratch)

Personal projects

- Load balancer (Go), Redis server, TCP server and JSON parser rebuilt from scratch (Java).

Technical Skills

Backend & Cloud

Java, Spring Boot, Python, Node.js, serverless & event-driven architecture, REST APIs, AWS (Lambda, API Gateway, DynamoDB, SQS, SNS, S3, EC2, IAM, CloudWatch), AWS CDK.

Frontend

Angular, React/Next.js, TypeScript, JavaScript, HTML/CSS, Sass, Bootstrap.

Databases

PostgreSQL, MySQL, DynamoDB, MongoDB/Mongoose, SQL/MSSQL.

Security & Authentication

Keycloak, HashiCorp Vault, IAM, custom authentication flows.

• **Testing & Quality**

Pytest, moto, Robot Framework, unit & e2e testing, code reviews.

• **Tools & DevOps**

Git, Linux, Docker, Jira/Confluence, AWS Lambda Power-tools, AWS Lambda Power Tuning.

• **AI & E-commerce**

AI / LLM agents, workflow automation, Shopify (Liquid, Apps, metaobjects), Supabase.
